

First four horizontal tower modes from actual ODB fields

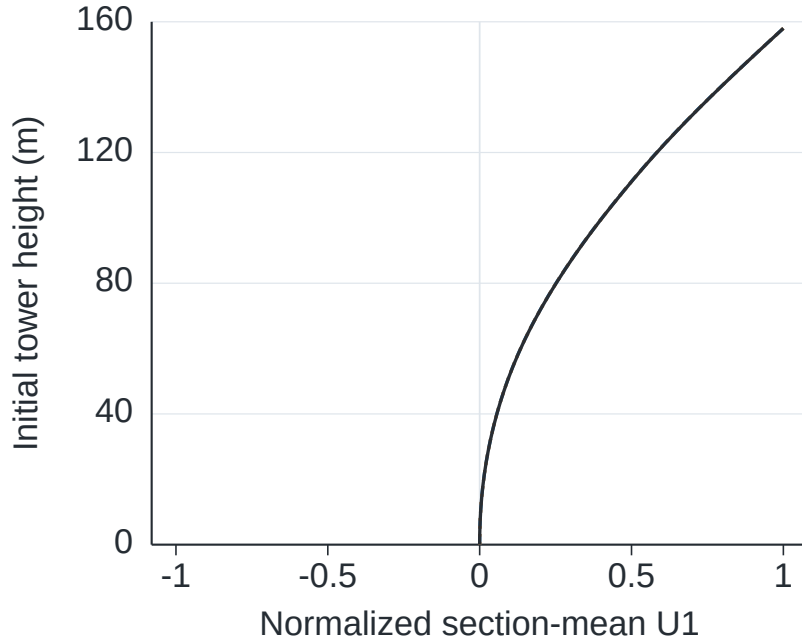

Section-mean tower displacement vs initial height; each curve normalized, sign aligned at tower top

--- G1 / 032

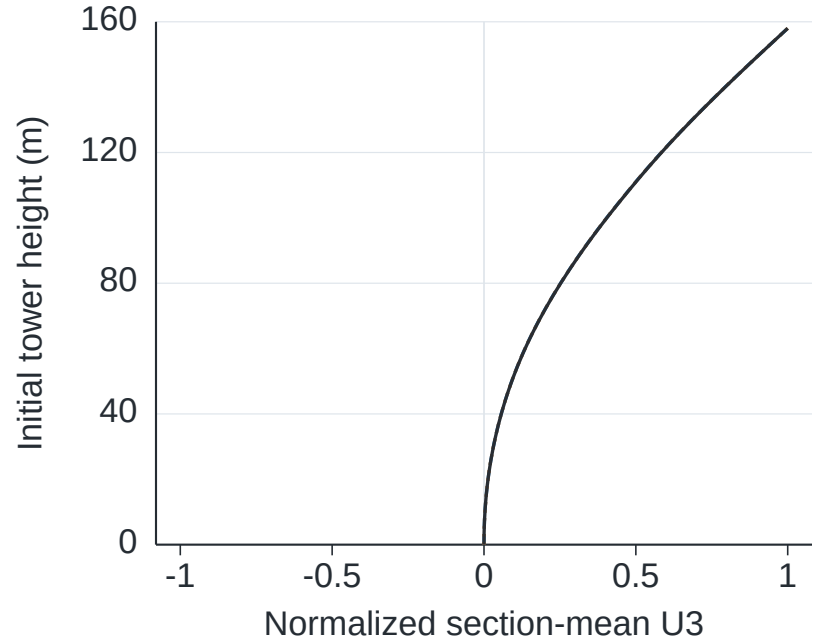

..... M2 / 034

— M3 / 035

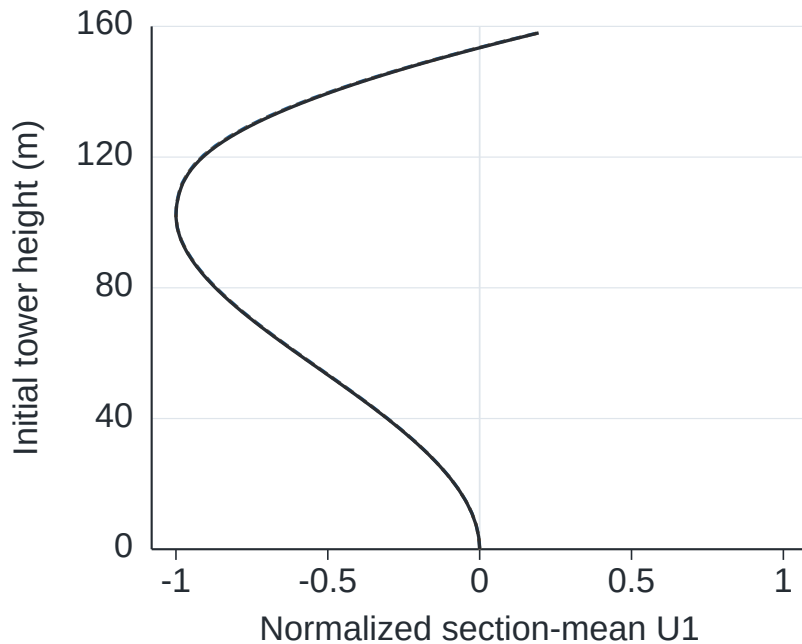

(a) Mode 1: X; M3 f = 0.13498 Hz

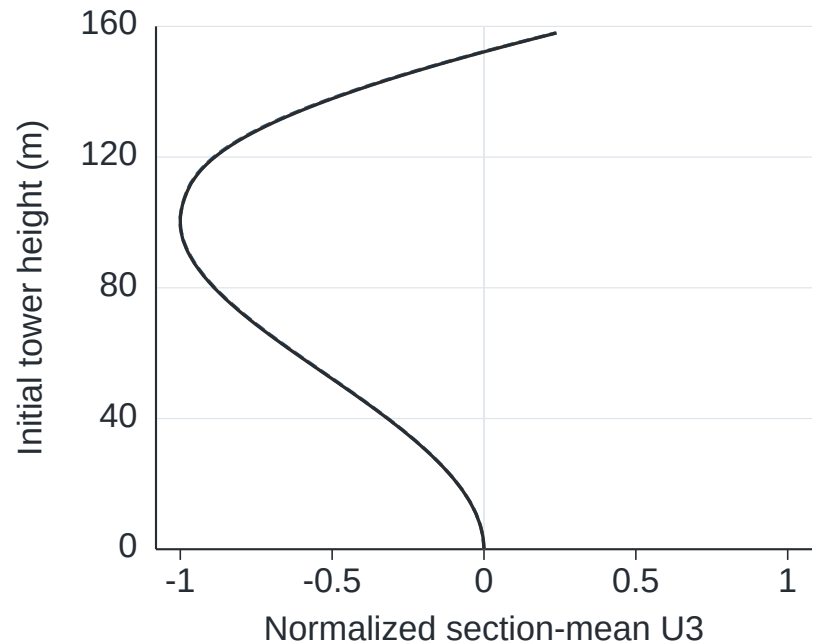

(b) Mode 2: Z; M3 f = 0.13553 Hz

(c) Mode 3: X; M3 f = 0.70763 Hz

(d) Mode 4: Z; M3 f = 0.74244 Hz

Averaging includes CSEG/SSEG tower nodes at each initial height (rounded to 4 decimals).

Only the relevant U1/U3 component is shown; normalization is for shape comparison, not physical amplitude.
