

Figure 2-1 | Tower and fixed RNA input geometry

Actual nodes and connectivity from DTU158_RECONSTRUCTED_M2.inp; undeformed input, no result contour.

(a) Complete assembly

(b) RNA: 28 B31 mass-carrier elements

32 nodes; 28 B31 elements

Rigid body at RNA_RP

$$\mathbf{RP} = (0, 160, 0) \text{ m}$$

Tower top = (0, 158, 0) m

Source-restored mass carrier

Not physical blade surfaces

Not a rotating aeroelastic model

Mass / inertia acceptance:

see separate discrete FE audit.

(c) CSEG_01: actual refined solid mesh

CSEG_01 | C3D8R / C70

72 circumferential divisions

3 axial divisions

2 divisions through thickness

432 hexahedral elements

Height: 3.64 m

Wall thickness: 0.28 m

Outer diameter: 8.33 -> 8.17 m

M2 tower: 15,120 elements / 29,808 nodes. RNA skeleton is shown at true relative scale in (a).

Projected coordinate basis: (a,b) $u = X + 0.45 Z$; $v = Y + 0.18 Z$. (c) stated orthographic basis in QA metadata.

Source SHA256: 428a8bb567a52200311ebb1a2019a71c304d1c427ce761f0c836e4fc46fe50f1

Scope: traceable reconstructed reference branch; geometry/topology figure only. No stress, mode shape or validation result is implied.
